- Non specificato se nascita singola o multipla
 -- Nato fuori dall'ospedale
 --- Non ospedalizzato V39.2
 --- Ospedalizzato V39.1
 -- Nato in ospedale (senza menzione di parto cesareo o intervento) V39.00
 --- Con parto cesareo o intervento V39.01
 - Unico(a)
 -- Nato(a) fuori dall'ospedale
 --- Non ospedalizzato (a) V30.2
 --- Ospedalizzato (a) V30.1
 -- Nato (a) in ospedale (senza menzione di parto cesareo o intervento) V30.00
 --- Con parto cesareo o intervento V30.01

	MALIGNO			BENIGNO	COMPOR- TAMENTO INCERTO	NATURA NON SPECIFICATA
	PRIMARIO	SECONDARIO	IN SITU			
Neoplasia, neoplastico/a	199.1	199.1	234.9	229.9	238.9	239.9

Note - 1. La tabella seguente contiene i codici per sede anatomica delle neoplasie. Per ciascuna sede ci sono sei possibili codici, a seconda che la neoplasia in questione sia maligna, benigna, in situ, di incerto comportamento, o di natura non specificata. La descrizione della neoplasia spesso indicherà quale delle sei colonne è appropriata; es.: melanoma maligno della pelle, fibroadenoma benigno della mammella, carcinoma in situ della cervice uterina. Quando mancano tali precisazioni, si consulterà il rinvio dell'indice dove viene data la guida alla colonna appropriata per ciascuna varietà morfologica (- Istologica) elencata; es.: mesonefroma - V. neoplasia, maligna; embrioma - v. anche neoplasia, comportamento incerto; malattia, di Bowen - V. neoplasia, pelle, in situ. Tuttavia la guida nell' indice può non essere considerata se è presente una delle descrizioni menzionate sopra es: adenoma maligno del colon viene codificato in 153.9 e non in 211.3, poiché l' aggettivo maligno non considera la voce dell' indice "adenoma - v. anche neoplasia, benigna

2. Le sedi contrassegnate con il segno * (es: faccia NIA*) devono essere classificate in neoplasia maligna della pelle di quelle sedi se la varietà della neoplasia è un carcinoma a cellule squamose o un carcinoma epidermoide e in neoplasia benigna se la varietà della neoplasia è un papilloma (ogni tipo).
